

# ***EZ-LOADER***

## ***LOAD OUT CONVEYOR***

The EZ-Loader load out conveyor is the perfect way to efficiently transfer the sealed / stitched bags to the loading area. The ergonomically designed conveyor allows the operator to transfer the loaded bags from waist height eliminating the need to bend down to lift the bags.

The conveyor height can be adjusted by the push of a button to perfectly align the conveyor with the transfer conveyor for seamless transition from bag sealing to stacking.

Systems can be designed to incorporate 240V single or 3 phase drives depending on application.

- ◆ Variable speed drive
- ◆ Linear actuator height control
- ◆ 240 volt power
