

COMPAC-50

Your compaction bagging solution

Standard Hopper Size
5m³ Hopper Volume

Accurate Weight Control System

Fast bagging up to 180 bags per hour

Options:
Anti Bridging
Air Cannon

Touch Screen Controls

Adjustable legs for height control

Built in fork tubes for easy movement

Quick action bag clamps

The semi automated compaction range of baggers is designed to service industries with the specific requirement to compact products into bags.

A robust design ensures continued bagging and the touch screen control make it easy for operators to program the unit. The unit has been designed to suit a range of commercial feed mixes, grains, organic material, wool, fibres and much more.

The standard bagger comes in a 5m³ hopper and is capable of up to 180 bags an hour. The dual bag system ensures that down time is minimal in between bag changes.

54 Kabi Circuit, Deception Bay Q Id 4508

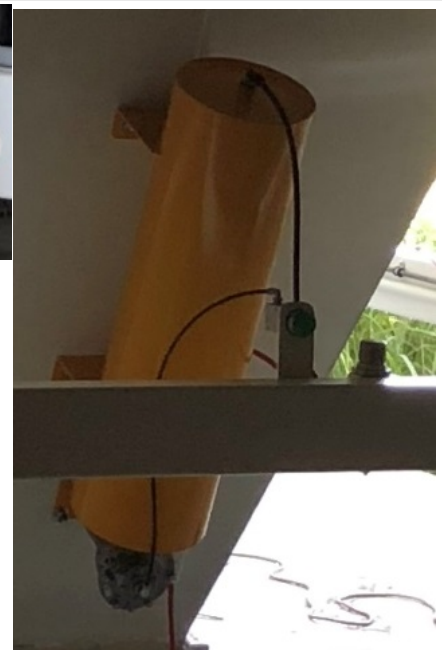

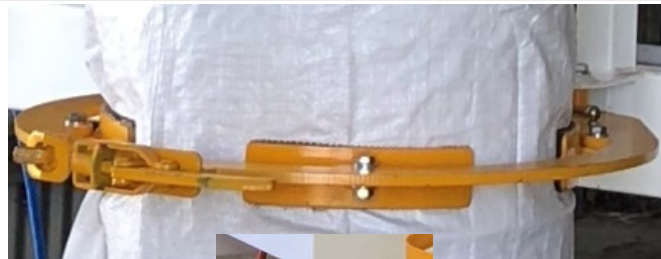

The bag kicker can be set up to suit your bag height and aids in settling of the product into the bag.

The powerful direct drive gearbox can be supplied in single or 3 phase.

A pedestal mounted touch screen is positioned next to the operator for simplicity. Accuracy of fill is achieved by load cells positioned on the travers carriage.

The rear discharge chute enables the unit to be cleaned with ease. The reversible screw drives the left over product from the cleanout chute.

Powerful compaction Rams ensure the bags are packed firm.

A simple clamping device operates manually on both sides of the chute. The clamps make sure the bag stays in place during filling.

Each corner of the compaction bagger has adjustable legs fitted to enable ergonomic height control for the operator

Optional: Air Cannon eliminates hopper bridging
