

EZ Machinery is proudly 100% Australian owned.

All EZ Machinery products are designed and manufactured in-house at our high-tech Brisbane facility.

With Quality, end user functionality and life-cycle performance at the forefront of our design methodology, EZ Machinery takes great pride in delivering tough, durable, cost effective, innovative solutions pertinent to achieving the best possible outcome in the harsh Australian environment.

Our in-house Design, Engineering and Manufacturing capability, combined with an innovative approach to solution based outcomes, have delivered market leading solutions from, our standard range of machinery, to minor customisation, to fully customised turnkey solutions.

Whether you are looking to enter the market, upgrade/replace or searching for the best solution on a custom project, contact EZ Machinery today, and know that our highly experienced, knowledgeable and innovative team will find you the best solution.

Office Hours:
8:30 AM to 5 PM Mon-Fri

Designed for use on excavators and backhoes. Capable of using both standard and high flow hydraulics, our Swinging Flail Mulcher's are perfect for scrub, regrowth and light vegetation management. The Mulchers comes fitted with a high performance direct drive motor (with no need for aftermarket cooling) and plumbed specifically to suit the auxiliary circuit of your machine.

The heavy duty frame incorporates the robust, balanced rotor. There are three flails, two Y Blades and a single hammer or flat blade attached to each mounting lug on the cutter drum. This combination has proven to be the most versatile, enabling a relatively fine cut for general pruning, brush and grass cutting, while also having the ability to tackle larger branches up to 100mm.

Flail Mulchers are an excellent choice for tree pruning or brush and grass management near populated areas as the cut debris is directed downward and not outward. Utilising a swinging flail arrangement the flails will swing back when striking hard objects hidden in undergrowth and therefore sustain minimal if any damage.

The Flails are reversible prolonging the service life of the blades and therefore keeping the replacement of your blades to a minimum. We always have replacement flails in stock for customers when required.

A hydraulic motor is matched to the hydraulic output of your machine for superior power delivery. Anti-vibration mounts are used to reduce vibration instead of high maintenance belts and pulleys. This ensures you get the maximum performance from your mulcher using your standard hydraulic system. The Machines are fitted with two main high pressure hoses for hydraulic inlet and outlet, and in most cases, a case drain is not required.

Each machine comes with a custom built hitch to suit your machine (Excavator and Back Hoer), avoiding any unnecessary wear on the pins or bushes.

This Machine also comes with a built-in thumb saddle that when combined with the optional hydraulic thumb grab, can easily pick up and remove obstacles such as timber and rocks. The thumb saddle can also be used to maneuver material out of the way without damaging the mulcher.

The Mulchers are locally designed and manufactured in Brisbane, Australia to suit the harsh Australian conditions. Durable, robust and cost effective the EZ Machinery Range of Hydraulic Swinging Flail Mulchers are the right choice for your specific application.

For further information on the range of Mulchers including specifications and warranty call 1300 736 982.

Model	Mulcher 50-EZ	Mulcher 75-EZ	Mulcher 100-EZ	Mulcher 125EZ
Working Width	500mm	750mm	1000mm	1250mm
Weight	180KG	480KG	550kg	850KG
